

Juan Romero

Senior Full-Stack Software Engineer | React • TypeScript • Frontend Architecture • Experimentation & Conversion Optimization

San Diego, CA | (210) 846-7265 | jjromee05@gmail.com | juan-rome.github.io

Profile

Senior Full-Stack Software Engineer with 8+ years of experience building scalable, customer-focused web applications across fintech and enterprise platforms. Specialized in React, TypeScript, Angular, Spring Boot, experimentation platforms, and modern frontend architecture, with a strong focus on accessibility, conversion optimization, developer experience, and platform reliability. Promoted to Senior Software Engineer in 2025 in recognition of consistently exceeding expectations, with a proven track record of owning cross-functional programs end-to-end, building experimentation and developer-tooling infrastructure adopted team-wide, and driving measurable business impact through A/B experimentation, AI-assisted development workflows, and frontend modernization.

Technical Skills

- Languages: JavaScript, TypeScript, HTML, CSS, Java, SQL
- Frontend: React, Next.js, Angular, RxJS, Storyblok CMS
- Backend: Spring Boot, Spring Batch, Node.js
- Experimentation & Analytics: Optimizely (Web & Feature Experimentation), Amplitude, FullStory, Feature Flagging, A/B & Multi-Armed Bandit Testing
- Cloud & DevOps: AWS, NGINX, New Relic, PagerDuty
- Testing & QA: Cypress, E2E Test Automation, K6 Performance Testing, Test-Driven Development
- Practices: Accessibility (WCAG 2.1 AA) & Performance Optimization
- AI & Developer Tooling: Claude Code, Figma/Jira MCP-based agentic workflows, Copilot

Professional Experience

Senior Software Engineer | Earnest | 04/2024 to Present (promoted from Software Engineer II, Q3 2025)

- Led frontend development and experimentation efforts across Earnest's Rate Check funnel using React, TypeScript, and Next.js, contributing to measurable increases in conversion and application submissions.
- Architected and delivered the front-end build-out of two major cross-team programs, the Unified Application Flow (UAF) funnel migration and the Medical Residency application flow, using AI-assisted workflows (Claude + Figma/Jira MCPs) to accelerate design-to-production delivery.
- Drove multiple high-impact A/B and multi-armed bandit experiments via Optimizely that improved funnel engagement and conversion, including +4.41% lift in Rate Check Results Viewed, +3.95% to 9.3% lifts through funnel reordering and step-reduction experiments, +18% lift in Application Submission through messaging updates, and +23% lift through ticker experience enhancements.
- Led integration of Verified's phone-based identity verification platform into the refinance rate check funnel, partnering cross-functionally with internal and external engineering teams to deliver a secure, scalable onboarding experience that increased conversion rates by 17% from rate check start to submission.
- Built and scaled shared experimentation infrastructure, including a centralized useExperiment hook (bucketing ID logic, Redis-backed sticky bucketing), an Optimizely SDK wrapper, and K6 performance test suites, establishing reusable foundations now relied on by every active experiment across the team.
- Designed and implemented nginx proxy architecture enabling multiple Next.js applications to run concurrently on shared staging and production servers, unblocking platform deployment beyond typical front-end scope.
- Redesigned refinance calculator experiences with a strong focus on accessibility and usability, increasing accessibility scores to 85%+ while reducing customer drop-off and ensuring WCAG 2.1 AA compliance.
- Partnered cross-functionally with Security and Data & Analytics teams, tightening environment variable boundary risk following a production incident and auditing Optimizely bucketing consistency across lending surfaces, strengthening platform reliability and experiment data integrity.
- Optimized New Relic and PagerDuty alerting workflows by refining alert thresholds and consolidating redundant monitoring, reducing alert noise by 80 to 90% and improving mean-time-to-acknowledge (MTTA).
- Leveraged Claude Code and agentic coding workflows to accelerate feature development, test coverage, and debugging, cutting routine implementation time by an estimated 30% while maintaining code quality standards.

Senior Software Engineer | Capital One | 05/2022 to 10/2023

- Led development of three major integrations and frontend redesigns using Lit web components, improving user adoption by 35% and overall user experience metrics by 65%.

- Partnered cross-functionally with Engineering, QA, and Operations teams to resolve complex production issues, reducing application errors by 30% and improving platform reliability.
- Architected and delivered solutions for 15+ new and existing features across micro frontend applications, improving host compatibility and customer experience.

Full Stack Software Engineer II | HEB Grocery | 04/2020 to 05/2022

- Diagnosed and resolved production issues, ensuring 99% uptime and reducing incident resolution time by 40% through proactive monitoring and alerting systems.
- Collaborated with designers, stakeholders, and engineers to deliver customer-facing features using Angular, RxJS, TypeScript, HTML, and CSS.
- Streamlined onboarding for junior engineers by creating training materials and conducting workshops that reduced ramp-up time by 50%.

Full Stack Software Engineer | HEB Grocery | 06/2018 to 04/2020

- Implemented new application features and resolved complex technical issues, improving user satisfaction and reducing customer-reported defects.
- Developed automated batch processing jobs using Spring Boot, Spring Batch, Java, MySQL, JDBC, and JPA, reducing data processing time by 40%.

Education

Bachelor's Degree, University of Texas at San Antonio
